

Day 1 Instructor Run Sheet (120 minutes)

For the instructor only. Teach in Hindi. All written material stays in English. Times are a plan, not a promise. Use the **cut lines** if time runs short.

Before the class

Ask the lab attendant: do the lab PCs keep files between days? Where can students save a backup (USB or a shared folder)?

Put the `Day-1-Web-Basics/starter` and `done` folders on the LAN share or on USB sticks, so students can copy them.

Put the installer files in the LAN share (see `../installer-kit`). Write the path on the board.

Test the projector. Use a large font in VS Code (**Ctrl and +** to zoom in) so the back row can read.

Open `done/notes-board` on your own screen so you can show the finished result.

Timeline

Minutes	What	Notes
0 to 5	Welcome, plan for five days	Show the table of days and the finished Notes Board (Day 5 goal)
5 to 25	Concept talk: web, request and response, frontend, backend, database	Use the restaurant story. Draw the request and response picture on the board. Ask the class: "Which part is the kitchen?"
25 to 35	VS Code tour and Part 0, Part 1 of the lab	File extensions on, folder created, Auto Save on. Walk the room: this is where small problems start
35 to 50	Lab Parts 2 to 5: HTML	Live code on the projector, a few lines at a time. After each part, ask students to hold up a hand when they are done
50 to 55	Part 6: open in the browser	Show the edit, save, refresh loop. Say it three times
55 to 85	Lab Parts 7 and 8: CSS	Explain 8a and 8b. Let them paste 8c. Ask them to change <code>--accent</code>
85 to 100	Part 9: About page	Remind them: students choose what to show. Encourage keeping the instructor line
100 to 105	Parts 10 and 11: dev tools, backup	Backup is not optional
105 to 115	Quiz (5 questions)	See <code>../quiz</code>
115 to 120	Homework and questions	Installer folder, GitHub account, written questions

Cut lines (if you are running late)

1. Skip Part 10 (dev tools). Do it as a two-minute demo on Day 2.
2. Give the About page as a copy-paste from the `done` folder, and ask students only to change their details.
3. Move the quiz to the first 10 minutes of Day 2.

Do not cut: the concept talk (frontend, backend, database), the edit-save-refresh loop, the backup, and the homework.

Concept talk: points to say out loud

- The web is a conversation: request, response.
- Frontend is the dining room, backend is the kitchen, database is the storeroom.
- HTML is the walls, CSS is the paint, JavaScript is the electricity.
- A computer is not magic. It does exactly what the files say.
- Mistakes are normal. Developers make mistakes all day. The skill is finding and fixing them.

Common problems (see the Stuck Sheet)

- File saved as `index.html.txt` because extensions were hidden.
- CSS not linked or saved in the wrong folder.
- Forgetting to save, or forgetting to refresh.
- Missing closing tags.

Check before ending the class

At least most students can show `index.html` with a styled page.

Students know where their `Workshop` folder is, and they made a backup.

Students know where the installer folder is and what to collect: Node.js 24 LTS (`.msi` , 64-bit) and Git for Windows (`.exe` , 64-bit).

Students know to create a GitHub account at home.

Write down the names of students who seemed lost, so you can check on them first tomorrow.

Notes for your own preparation tonight (Day 2)

- Test the Day 2 installers on one clean Windows 11 PC. Use `INSTRUCTOR-PILOT-CHECKLIST.md` in the main folder.
- Prepare the Day 2 starter folder for the LAN share (it is the same as the Day 1 `done` folder).
